

Six

ways to adapt information to ensure that it is accessible by individuals with a disability

1

Use simple and clear language

Make your sentences short and direct. Avoid jargon where possible, and if technical terms are necessary, always offer a definition. Where possible, create a glossary to explain these.

2

Format

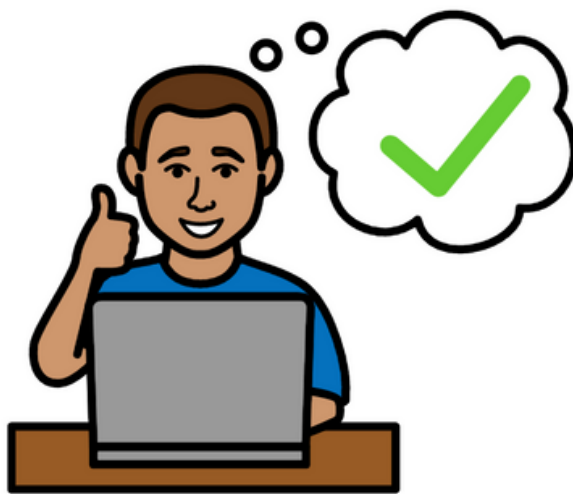

Use headings or subheadings to break text up. Use bullet points or lists to help reduce cognitive load.

3

Consistency

Use a consistent layout throughout the document, with the same fonts, formatting and colours throughout.

4

Font choice

Use a sans-serif font (e.g., Arial, Calibri). Avoid script fonts, italics and underlining. Font should be at least size 16, with 1.5 line spacing.

5

Incorporate multisensory elements

Using multi-media formats ensures that your information/resources are as accessible as possible to a wider audience. Provide an audio recording of the text or a video explaining the concepts. Any videos should have captions and a downloadable transcript.

6

Use visuals

Consider using either symbols (e.g. picture communication symbols or Widgit symbols) and/or photos. This is a useful way to support understanding.
